Year 2025/2026

Fall semester

COURSE DESCRIPTION

This second-year undergraduate course is designed for students with a deeper interest in macroeconomics. We will first study the various growth model to have alternative to Solow growth model to see if 1) productivity growth and the technological growth are purely exogenous components or if it can be affected also endogenously by other macroeconomic variables 2) we also see alternative growth model which includes the distributional/inequality to see if they can also affect the long-term patter of the macroeconomics growth. In the second part, we will compare various short- and medium-term macroeconomic theories to incorporate financial crises into the macroeconomic theory. The modern macroeconomic has been affected by various financial crises. We have observed macroeconomic fluctuation, the cycle of boom and bust of bubble and crash, which remains a permanent fixture of industrial economies. For two hundred years, these cycles have been superimposed on rising affluence in Western and, more so, in Asian economies. This course explores the causes of growth and cycles from the perspectives of different schools of thought. In particular, the roles of monetary, fiscal, and regulatory policies will be examined in light of the historical and recent economic performance of the United States, Japan, and other industrial economies.

Students completing this course will be able to (1) show fluency in the key concepts, models and tools of macroeconomic theory, (2) demonstrate understanding of macroeconomic data and its relevance, (3) critically read and assess macroeconomic news (e.g. Financial Times, Guardian, Nikkei Asia, etc.), and (4) apply theoretical knowledge to review the core of current economic events and policy

Type of course

Seminar course

Language of instruction

English

PEDAGOGICAL OBJECTIVES

Students completing this course will be able to (1) show fluency in the key concepts, models and tools of macroeconomic theory, (2) demonstrate in the 15 min presentation format to show their understanding of macroeconomic data and its relevance, (3) critically read and assess macroeconomic news (e.g. Financial Times, Guardian, Nikkei Asia, etc.), and (4) be able to apply theoretical knowledge to review the core of current economic events and policy discussions.

COURSE GRADE SYSTEM

To validate the course, the student is expected to pass the following assignments:

Participation (10%), 4 multiple-choice quizzes (15%), one midterm exam (25%), one presentation discussing a macro/finance topic from the news/articles (15%), and a final exam (35%).

DETAILED OUTLINE

Session 1: Long-Run Economic Growth, Review of Solow model: Blanchard, Chapters 10, 11, 12

Session 2: Alternative Long-Run Economic Growth Models

Session 3: Continuation of the Alternative Long-Run Growth Model

Session 4: Review of Labor Market, Unemployment & Inflation, Goods Market, Blanchard, Chapters 3, 7, 8

Session 5: Financial Market, Blanchard, Chapter 4

Session 6: IS-LM Model, Blanchard, Chapters 5–6

Session 7: IS-LM-PC Model, Blanchard, Chapters 9

Session 8: Monetary and Fiscal Policy, Blanchard, Chapters 22 & 23

Session 9: Comparison of various Macro-Finance theories

Session 10: Is the financial crisis inherited as a part of modern capitalism? Political Economy and Financial Instability Hypothesis, Minsky, H (1992), “ [The Financial Instability Hypothesis \(Links to an external site.\)](#)”, Working Paper 74 (1992), The Levy Institute

Session 11: Monetary policy and Income equality (if time allows)

Session 12: Final Exam

REQUIRED READING (10 MAXIMUM)

Blanchard O., Macroeconomics, 9th Edition (Pearson).
Other articles and textbooks will be added.
